Batch Experiment Report

Date: 2026-03-01 14:08:23 **Batch Directory:** `vision_temp_1.0`

1. Experimental Setup

Parameter	Value
Models	Text: `openai/gpt-4o-mini` Vision: `google/gemini-2.0-flash-001`
Temperatures	Text: `0.1` Vision: `1.0`
Iterations	30
Embedding Model	`google/siglip-so400m-patch14-384`
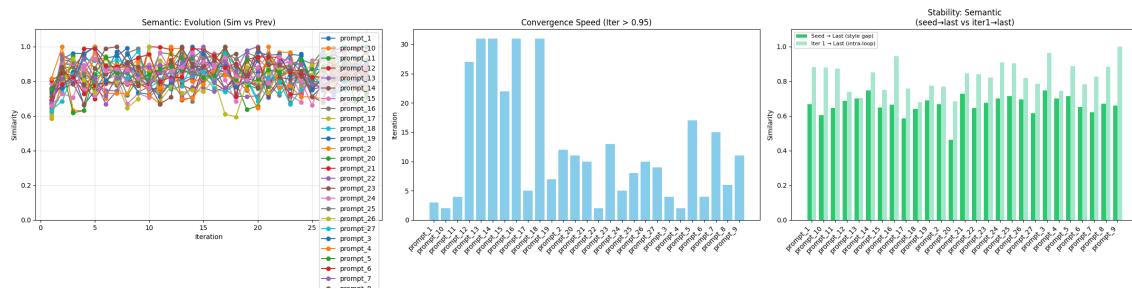

2. Batch Analysis

Aggregate Statistics
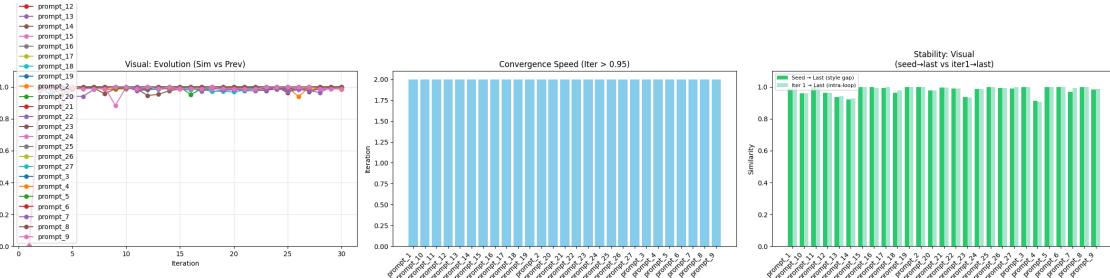

| Metric	Mean	Min	Max
Semantic Stability — Seed→Last (style gap)	0.665	0.463	0.749
Semantic Stability — Iter 1→Last (intra-loop)	0.826	0.678	1.000
Visual Stability — First Image→Last	0.980	0.914	1.000
Visual Stability — Iter 2→Last (intra-loop)	0.982	0.907	1.000
Semantic Convergence (Step)	13.3	3	32
Visual Convergence (Step)	3.0	3	3
MMD Code Similarity (mean step-by-step)	0.829	0.507	0.992
Total Cost	$0.2173 (Avg: $0.0080/run)	-	-

4. Detailed Experiment Log

prompt_1

Initial Prompt:

> *A simple user authentication flow. User inputs credentials, System validates hash, returns Token or Error.*

- **Cost:** $0.0052
- **Data:** [trajectory.json](#), [metrics.json](#)

---

prompt_10

Initial Prompt:

> *A CI/CD pipeline with rollback. Commit -> Test. Fail? Notify Dev (Loop). Pass? Deploy. Monitor Health. bad? Rollback (Loop).*

- **Cost:** $0.0114
- **Data:** [trajectory.json](#), [metrics.json](#)

---

prompt_11

Initial Prompt:

> *An event sourcing loop. User Action -> Event Bus -> Consumer updates View DB. View reflects new state to User.*

- **Cost:** $0.0083
- **Data:** [trajectory.json](#), [metrics.json](#)

---

prompt_12

Initial Prompt:

> *A garbage collection mark-and-sweep. Scanner traces roots, marks reachable, sweeps unreachable, frees memory, waits for next cycle.*

- **Cost:** $0.0085
- **Data:** trajectory.json, metrics.json

---

prompt_13

Initial Prompt:

> *A home thermostat. Sensor reads Temp. If Low, Heater On. Temp Rises. If High, Heater Off. Temp Falls.*

- **Cost:** $0.0103
- **Data:** trajectory.json, metrics.json

---

prompt_14

Initial Prompt:

> *The hydrological water cycle. Ocean water Evaporates into Clouds. Clouds Condense into Rain. Rain flows into Rivers. Rivers return to Ocean.*

- **Cost:** $0.0067
- **Data:** trajectory.json, metrics.json

---

prompt_15

Initial Prompt:

> *An engine combustion cycle. Intake valve opens, Piston moves down. Valve closes, Piston compresses. Spark plug fires (Combustion). Piston driven down. Exhaust valve opens.*

- **Cost:** $0.0114
- **Data:** trajectory.json, metrics.json

---

prompt_16

Initial Prompt:

> *The Hero's Journey. Ordinary World -> Call to Adventure -> Ordeal -> Reward -> Return to Ordinary World (Changed).*

- **Cost:** $0.0082
- **Data:** trajectory.json, metrics.json

---

prompt_17

Initial Prompt:

> *The Scientific Method. Observe -> Hypothesize -> Experiment -> Analyze. Data supports? Theory. Data rejects? New Hypothesis (Loop).*

- **Cost:** $0.0101
- **Data:** trajectory.json, metrics.json

---

prompt_18

Initial Prompt:

> *The Design Thinking process. Empathize -> Define -> Ideate -> Prototype -> Test. Test fails? Ideate again (Loop).*

- **Cost:** $0.0110
- **Data:** trajectory.json, metrics.json

---

prompt_19

Initial Prompt:

> *E-commerce Microservices. API Gateway routes to Product Service (Product DB), Order Service (Order DB), User Service (User DB).*

- **Cost:** $0.0102
- **Data:** trajectory.json, metrics.json

---

prompt_2

Initial Prompt:

> *A password reset flow. User requests reset, System sends Email, User clicks Link, enters New Password.*

- **Cost:** $0.0083
- **Data:** trajectory.json, metrics.json

---

prompt_20

Initial Prompt:

> *A Kubernetes Cluster Architecture. Control Plane manages Nodes. Nodes contain Pods. Pods contain Containers.*

- **Cost:** $0.0066
- **Data:** trajectory.json, metrics.json

---

prompt_21

Initial Prompt:

> *A React Component Tree. App Component holds Header, Main, Footer. Main holds Sidebar and Content Area. Content Area holds Article List.*

- **Cost:** $0.0102
- **Data:** trajectory.json, metrics.json

---

prompt_22

Initial Prompt:

> *The Solar System. Sun at center. Inner Planets (Mercury, Venus, Earth) orbit Sun. Earth has Moon. Outer Planets (Jupiter, Saturn) orbit Sun. Jupiter has many Moons.*

- **Cost:** $0.0106
- **Data:** trajectory.json, metrics.json

---

prompt_23

Initial Prompt:

> *A Biological Trophic Pyramid. Producers (Plants) at base. Primary Consumers (Herbivores) eat Producers. Secondary Consumers (Carnivores) eat Primary. Decomposers recycle all.*

- **Cost:** $0.0058
- **Data:** trajectory.json, metrics.json

---

prompt_24

Initial Prompt:

> *Human Nervous System. Central NS (Brain, Spine). Peripheral NS splits into Somatic and Autonomic. Autonomic splits into Sympathetic and Parasympathetic.*

- **Cost:** $0.0147
- **Data:** trajectory.json, metrics.json

---

prompt_25

Initial Prompt:

> *A Biological Taxonomy. Domain Eukarya -> Kingdom Animalia -> Phylum Chordata -> Class Mammalia.*

- **Cost:** $0.0058
- **Data:** trajectory.json, metrics.json

---

prompt_26

Initial Prompt:

> *A Corporate Org Chart. CEO leads VP Eng, VP Sales, VP HR. VP Eng leads Backend, Frontend, QA Teams.*

- **Cost:** $0.0108
- **Data:** trajectory.json, metrics.json

---

prompt_27

Initial Prompt:

> *A Decision Tree for Loan Approval. Credit Score > 700? Yes -> Income > 50k? Yes -> Approve. No -> Deny.*

- **Cost:** $0.0059
- **Data:** trajectory.json, metrics.json

---

prompt_3

Initial Prompt:

> *An email subscription process. User submits email, System adds to DB, System sends Welcome Email.*

- **Cost:** $0.0045
- **Data:** trajectory.json, metrics.json

prompt_4

Initial Prompt:

> *A gravity-fed water filtration system. Rainwater to Gutter, Gutter to Pipe, Pipe to Filter, Filter to Tank.*

- **Cost:** $0.0072
- **Data:** trajectory.json, metrics.json

prompt_5

Initial Prompt:

> *A manufacturing assembly line. Raw material enters Conveyor, Stamping Machine shapes it, Painting Station colors it, Packaging wraps it.*

- **Cost:** $0.0074
- **Data:** trajectory.json, metrics.json

prompt_6

Initial Prompt:

> *A traffic light sequence. Green light stays for 60s, turns Yellow for 5s, turns Red for 60s.*

- **Cost:** $0.0052
- **Data:** trajectory.json, metrics.json

prompt_7

Initial Prompt:

> *A logical syllogism chain. Premise A implies B. B implies C. Therefore A implies C.*

- **Cost:** $0.0045
- **Data:** trajectory.json, metrics.json

prompt_8

Initial Prompt:

> *A historical timeline of 3 events. Event A causes Event B. Event B triggers Reaction C.*

- **Cost:** $0.0040
- **Data:** trajectory.json, metrics.json

prompt_9

Initial Prompt:

> *An algebraic derivation. Start with Equation 1, substitute Variable X, simplify to Result Y.*

- **Cost:** $0.0046
- **Data:** trajectory.json, metrics.json

Cost: $0.0046
